FOR IMMEDIATE RELEASE
February 9, 2010

Canadian Agricultural Safety Week, March 14-20

When it comes to safety, you can change your equipment and how things are engineered. You can change the materials you use. You can change your processes and practices for working. And you can easily change your safety rules in the workplace. But you can't change the devastating consequences of an accident after it happens.

Canadian farmers are reminded to “*Plan-Farm-Safety*” during Canadian Agricultural Safety Week, March 14 - 20. More information on this and other farm safety initiatives are available from the Canadian Agricultural Safety Association at www.casa-acsa.ca .
