## **Beef Cattle Handling Facilities - Evaluation Tools**

Launching a new, on-line Beef Cattle Handling Facility evaluation tool & inspection document. The assessment tool provides suggestions, based on your answers, for best practice improvements towards worker safety. Increasing handling efficiency can increase worker safety.

An introductory video presents the program and CASA resources to ranchers. Recognizing that ranchers already work with cattle handling systems, and that each system is unique, the program encourages ranchers to review what they have. General suggestions are provided with each question of the evaluation tool to improve both efficiency and worker safety. A sample log is also provided for documenting inspections.

Demonstrating to ranchers that simple changes to existing cattle handling facilities can increase efficiency and worker safety. A program for all Canadian ranchers.
