Developing a right-sized sustainable safety management system for the farming industry

Historically agriculture industry is among the highest contributors to work place safety incidents.

This process leverages knowledge and experiences developed in high-risk industries that are systematic, structured and disciplined in their approach to managing HSE. The presenters are knowledgeable in identifying and mitigating farming hazards. Applying federal and provincial regulations requirements to the work activities undertaking in the farming industry, the presenters have been able to create a fit for purpose safety management system that is designed to improve farm HSE performance when applied.

Successful implementation of an effective and sustainable HSE management system is intended to drive continuous performance improvements in farm HSE. We expect a reduction in serious injuries and fatalities from the implementation of this program.
